

Guidelines for Authors

General Information

The mission of the *Journal of Preventive Medicine and Public Health (JPMPH)* is to promote research, policy, education, and practice in the field of preventive medicine and public health by publishing papers of high scientific quality. Contributions of original articles, reviews, special articles, brief reports, case reports, perspectives and critical commentaries, letters, methods in the fields of research, and public health debates are welcome. The journal is issued six times a year (the last day of January, March, May, July, September, and November) and the contents of the *JPMPH* are indexed in MEDLINE, PubMed, PubMed Central, KoreaMed, KoMCI, CrossRef, Scopus, EMBASE, EBSCO, CAS, DOAJ, and Google Scholar.

Editorial and Publication Policies

Research and Publication Ethics

For the policies on research and publication ethics not stated in the Instructions, Guidelines on Good Publication (<http://publicationethics.org/>) or Good Publication Practice Guidelines for Medical Journals (<http://kamje.or.kr/>) can be applied.

Authorship

Authorship credit should be based on: (1) substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data; (2) drafting the article or revising it critically for important intellectual content; (3) final approval of the version to be published; and (4) agreeing to be accountable for all aspects of the work in ensuring that the questions related to the accuracy or integrity of any part of the work are appropriately investigated and resolved. Authors should meet these 4 conditions. All those designated as authors should meet all four criteria for authorship, and all who meet the four criteria should be identified as authors. Those who do not meet all four criteria should be acknowledged as contributors not be authors.

The addition of an author to a manuscript under review is possible only with the editor's approval. Changes in authorship cannot be made after the manuscript is accepted for publication.

Corresponding author and first author: *JPMPH* does not allow multiple corresponding authors for one article. Only one author should correspond with the editorial office and readers for one article. *JPMPH* does accept notice of equal contribution for the first author when the study was clearly performed by co-first authors.

Originality, Plagiarism and Duplicate Publication

Submitted manuscripts must not have been previously published or be under consideration for publication elsewhere. No part of the accepted manuscript should be duplicated in any other scientific journal without the permission of the Editorial Board. Submitted manuscripts are screened for possible plagiarism or duplicate publication by CrossCheck (<http://www.ihtenticate.com/>) upon arrival. If plagiarism or duplicate publication related to the papers of this journal is detected, the manuscripts may be rejected, the authors will be announced in the journal, and their institutions will be informed. There will also be penalties for the authors.

A letter of permission is required for any and all material that has been published previously. It is the responsibility of the author to request permission from the publisher for any material that is being reproduced. This requirement applies to text, figures, and tables.

Secondary Publication

It is possible to republish manuscripts if the manuscripts satisfy the conditions of secondary publication of the International Committee of Medical Journal Editors (ICMJE) Recommendations (http://www.icmje.org/urm_main.html).

Conflict of Interest Statement

The corresponding author must inform the editor of any potential conflicts of interest that could influence the authors' interpretation of the data. Examples of potential conflicts of interest are financial support from or connections to companies, political pressure from interest groups, and academically related issues. In particular, all sources of funding applicable to the study should be explicitly stated.

Statement of Human and Animal Right

Clinical research should be done in accordance of the Ethical Principles for Medical Research Involving Human Subjects, outlined in the Helsinki Declaration (<https://www.wma.net/policies-post/wma-declaration-of-helsinki-ethical-principles-for-medical-research-involving-human-subjects/>). Clinical studies that do not meet the Helsinki Declaration will not be considered for publication. Human subjects should not be identifiable, such that patients' names, initials, hospital numbers, dates of birth, or other protected healthcare information should not be disclosed. For animal subjects, research should be performed based on the National or Institutional Guide for the Care and Use of Laboratory Animals, and the ethical treatment of all experimental animals should be maintained.

Description of Participants

Ensure correct use of the terms sex (when reporting biological factors) and gender (identity, psychosocial or cultural factors), and, unless inappropriate, report the sex and/or gender of study participants, the sex of animals or cells, and describe the methods used to determine sex and gender. If the study was done involving an exclusive population, for example in only one sex, authors should justify why, except in obvious cases (e.g., prostate cancer). Authors should define how they determined race or ethnicity and justify their relevance.

Statement of Informed Consent and Institutional Review Board Approval

Copies of written informed consent documents should be kept for studies on human subjects. For clinical studies of human subjects, a certificate, agreement, or approval by the Institutional Review Board (IRB) of the author's institution is required. If necessary, the editor or reviewers may request copies of these documents to resolve questions about IRB approval and study conduct.

Process for Managing Research and Publication Misconduct

When the journal faces suspected cases of research and publication misconduct such as redundant (duplicate) publication, plagiarism, fraudulent or fabricated data, changes in authorship, an undisclosed conflict of interest, ethical problems with a submitted manuscript, a reviewer who has appropriated an author's idea or data, complaints against editors, and so on, the resolution process will follow the flowchart provided by the Committee on Publication Ethics (<http://publicationethics.org/resources/flowcharts>). The discussion and decision on the suspected

cases are carried out by the Editorial Board.

Editorial Responsibilities

The Editorial Board will continuously work to monitor and safeguard publication ethics: guidelines for retracting articles; maintenance of the integrity of the academic record; preclusion of business needs from compromising intellectual and ethical standards; publishing corrections, clarifications, retractions, and apologies when needed; and excluding plagiarism and fraudulent data. The editors maintain the following responsibilities: responsibility and authority to reject and accept articles; avoiding any conflict of interest with respect to articles they reject or accept; promoting publication of corrections or retractions when errors are found; and preservation of the anonymity of reviewers.

Registration of Clinical Trial Research

It is recommended that any research dealing with a clinical trial be registered at on appropriate online public registry. Manuscript with non-registered interventional clinical trials will not be considered for publication.

Data Sharing Statement

JMPH accepts the ICMJE Recommendations for data sharing statement policy (<http://icmje.org/icmje-recommendations.pdf>). All manuscripts reporting clinical trial results should submit a data sharing statement following the ICMJE guidelines.

Review Process

Upon submission of a manuscript, the board of editors for the **JMPH** will review the paper for appropriateness of content. Articles can be rejected at this initial review process. Articles that pass this preview are then reviewed by two or three experts in the field. The authors' names and affiliations are removed during peer review. Double-blind peer review averages 2 months to complete. The board of editors reserves the right to edit a manuscript for phrasing, style, and overall length at any stage prior to publication, while maintaining the scientific accuracy of the manuscript. Based on comments from reviewers and editors, authors may be asked to revise their manuscript. Authors are required to submit a letter of explanation regarding how they dealt with all comments and questions raised by reviewers and editors. If revisions cannot be submitted within one month, author(s) may request a one-month grace period. If the revised manuscript is not submitted within the required period, the manuscript will automatically be rejected. Manuscripts will not be returned after submission.

Manuscripts After Acceptance

Publication

If the manuscript is finally accepted, the proofreading will be sent to the corresponding author after professional manuscript editing and/or English proofreading. Proofreading should be performed again for any misspellings or errors by the authors. Before final proofreading, the manuscript may appear at the journal homepage or PubMed as an epub ahead of print with a unique digital object identifier (DOI) number for rapid communication. The epub ahead of print version will be replaced by the replacement XML file and a final PDF.

Publication order is based on the order of submission of finalized manuscripts. Dates of submission and acceptance appear in the journal.

Galley Proofs

Page proofs will be transmitted to corresponding authors by e-mail as PDF files. Authors are responsible for the content of page proofs. All page proofs should be read carefully, corrected if necessary, and returned within 48 hours of receipt. Corrections should be restricted to typesetting errors. Changes or additions to the edited manuscript are not allowed at this stage.

Page Charges

Authors are charged for the publication cost of their paper. Billing follows publication. Mandatory page charges of 40 000 Korean won per page for 7 printed pages or less and 50 000 Korean won per each additional page for over 8 printed pages will be requested. If you have any billing questions, please contact the editorial office (jpmph@gmail.com).

Copyrights, Open Access, and Creative Commons License

Copyright

The Korean Society for Preventive Medicine owns the copyright of all manuscripts published in *JPMPH*. Authors are required to sign the journal's "Copyright Transfer Agreement" form, which is downloadable from our homepage (<https://www.jpmph.org/>), should be signed by all authors, scanned and uploaded once a manuscript has been accepted. The corresponding author is responsible for obtaining signatures of all authors to obtain their consent for copyright transfer. The author is responsible for the content of both the original, and the reviewed and edited manuscript, accuracy of references and quotes, and any violations of the copyright agreement.

Open Access

JPMPH is an open access journal. It also follows the open access policy of PubMed Central at US National Library of Medicine (<http://www.ncbi.nlm.nih.gov/pmc/>).

All the content of the journal is available immediately upon publication without embargo period.

Creative Commons License

Articles are distributed under the terms of the Creative Commons Attribution Non-Commercial License (<http://creativecommons.org/licenses/by-nc/4.0/>), which permits unrestricted use, distribution, and reproduction in any medium, provided the original work is properly cited.

Manuscript of Categories

Original Articles

Manuscripts that report the results of original quantitative or qualitative public health research are published as original articles (up to 3000 words in the main text, not including abstract, tables, figures, references, and online-only material). A structured abstract of 250 words is required, with up to 5 tables and figures and no more than 40 references. The main text must follow the standard *JPMPH* format, with an Introduction and separate sections for Methods, Results, and Discussion. This format is the highest priority for the *JPMPH* and represents the majority of papers published.

Systematic Review (Including Meta-analysis)

These articles present a comprehensive search and appraisal of accumulating evidence of an important public health topic using a systematic approach. A systematic review may, or may not, include a meta-analysis. A structured abstract is required; for more information, see instructions for preparing structured abstracts. The text should not exceed 3500 words in length (not including abstract, tables, figures, references, and online-only material), with up to 100 references and no more than a total of 6 tables and figures.

Special Articles (including Methods, Hypothesis, and Lecture)

This is limited to invitation only on a recent or emerging topic of public health importance. The text is limited to 3500 words, with up to 50 references and no more than 5 tables and/or figures. Authors seeking to submit articles on a special topic should first contact the editor.

Brief Reports

Preliminary or novel findings may be reported (limited to 2000 words in the main text, a structured abstract, a maximum of 3 tables and figures, and up to 20 references). The main text of the brief report must follow the standard *JMPH* original article format, with an Introduction and separate sections for the Methods, Results, and Discussion.

Case Reports

Case reports are limited to 1500 words in the main text, an unstructured abstract, a maximum of 2 tables and figures, and up to 15 references.

Perspectives (including Statistics, Critical Commentaries)

Perspectives present a forum for raising awareness to timely public health issues. It provides an opportunity for authors to offer their critical evaluation of recent trends and advances in preventive medicine and public health. Perspectives are limited to 1200 words in the main text, an unstructured abstract, a maximum of 1 table or figure, and up to 10 references.

Letters to the Editor and Responses

Letters to the Editor referring to a recent *JMPH* article are encouraged up to 3 months after the article is published. No abstract is required. The editors reserve the right to edit and abridge letters and to publish responses. Letters may include a maximum of 5 references.

Editorials

Editorials in the *JMPH* are considered opinion pieces and do not undergo peer review. They may be commissioned by members of the formal editorial team or on occasion, reformatted as editorials from other submitted papers. Editorials are 1000 words in length with no abstract and up to 10 references. Subheadings may be used to guide readers through the major arguments in the text. Authors may upload suggested images as supplemental files at submission. Editor-in-Chief triages editorials to the member of the formal editorial team who is expert in the content area of the column.

Public Health Debates

From time to time *JMPH* will publish Public Health Debates that will serve as a forum for discussing controversies and critical issues in public health. Typically, 2 articles address a controversial topic and present different or opposing viewpoints. Each author is allowed 1000 words of text and up to 10 references in

which to state her or his position. The Editorial member will commission the articles for debate, but authors are welcome to suggest potential topics of interest and to inquire about possible submission.

Other Publication Types

Other publication types may be accepted. Recommended format can be discussed with the Editorial Board.

Manuscript Preparation and Submission Requirements

All manuscripts should be submitted at the *JMPH* e-submission website (<http://submit.jpmp.org>). Manuscripts can be submitted at any time. Original source files (cover letter, main text, tables, and figures) are required for submission.

Manuscript Preparation

Manuscripts submitted to the *JMPH* should be in proper and clear English. Manuscripts should be written and numbered in the following sequence: title page, abstract, keywords, manuscript body, acknowledgements, references, tables, and figures.

All manuscripts are subject to editorial peer review. The editors reserve the right to improve the style and, if necessary, return the manuscript to the author for revision. When a manuscript is received for consideration, the editors assume that no similar paper has been or will be submitted for publication elsewhere. The main document with manuscript text and tables should be prepared with MS Word file.

Title Page

The title page should include the following: (a) concise and descriptive English titles, (b) full author(s) names and affiliations, (c) description of funding source(s), and (d) the name and address of the corresponding author. Specification of study design in the title is recommended. Do not use abbreviations in the title. Running heads of no more than 40 characters, including letters and spaces, should be provided. Word counts for the abstract and text should be provided. Number of tables and figures should also be noted on the title page.

Abstract

Abstracts should appear on a separate page and be no more than 250 words in length. For original articles, brief reports, and reviews, provide a structured abstract with headings for Objectives, Methods, Results, and Conclusions. Unstructured abstracts are allowed for other types of papers (e.g., special articles, case

reports). References should not be included in abstracts and abbreviations should be used sparingly.

Keywords

Authors should provide a list of no more than six keywords below the abstract. Keywords should be selected from main headings listed in the Medical Subject Headings (MeSH) in Index Medicus published by the U.S. National Library of Medicine (www.nlm.nih.gov/mesh/MBrowser.html). If suitable MeSH terms are not yet available, current terms may be used.

Manuscript Text

The manuscript body should follow the requisites of each category of paper. A brief paragraph to clarify the main conclusion should be included at the end of the discussion section. Abbreviations should be spelled out in full the first time they appear in the manuscript body with the abbreviations in parentheses. Avoid over-use of abbreviations except for abbreviations of standard measurement units. All references in the text should be cited in English. In text, tables, and legends, identify references with Arabic numerals in square brackets, such as [1], [2]. Authors' last names should be cited in English. For two authors, connect the names by "and." For citations of three or more authors, include the first author's last name followed by "et al." When reporting drug names, generic names should be used. Commercial drug names can be used only when it is important for the study purpose. All measurement numbers should be written in Arabic numbers. When reporting probability, a lowercase *p* should be used. Percent should be written as % throughout. Lengths are expressed according to the metric system. Temperature is expressed in degrees Celsius, blood pressure as mmHg, and hemoglobin as g/dL. All other measures should be reported in International System of Units (SI Units). A space is placed between a measured value and its unit.

Supplementary Materials

If there are any supplementary materials to help the understanding of readers or too great amount data to be included in the main text, it may be placed as supplementary data. They should be cited as Table S1 or Figure S1, etc. They should be numbered in the manuscript by the numerical order in which it is cited. Supplementary material(s) will be published as submitted without editing.

Conflict of Interest

It should be disclosed here according to the statement in the Research and Publication Ethics regardless of existence of con-

flikt of interest. If the authors have nothing to disclose, please state: "The authors have no conflicts of interest associated with the material presented in this paper."

Acknowledgements

If necessary, persons who have made substantial contributions, but who have not met the criteria for authorship, are acknowledged here. All sources of funding applicable to the study should be stated here explicitly.

ORCID (Open Researcher and Contributor ID)

ORCID of all authors are recommended to be provided. To have ORCID, authors should register in the ORCID web site available from: <http://orcid.org/>. Registration is free to every researchers in the world.

References

Authors are responsible for the accuracy and completeness of references used in the manuscript. All references should be written in English. References written in other languages are indicated by writing (Korean, Japanese, Chinese, etc.) at the end. References should be numbered sequentially and cited in their order of use in the main body of the manuscript. References should be cited according to the system in the Index Medicus used by the US National Library of Medicine as shown in the following examples. Other types of references not described below should follow *The NLM Style Guide for Authors, Editors, and Publishers* (<http://www.nlm.nih.gov/citingmedicine>). Avoid using "abstracts," "unpublished observations" and "personal communications" as references. If an article has been published online, but has not yet been given an issue or pages, the DOI should be supplied.

Article within a journal

For six or fewer authors, list the surnames and initials of all authors; for seven or more list the first six authors and add et al., title of article, name of journal abbreviated according to Index Medicus style, year, volume, issue, first and last page numbers.

Theses

Lee OH. Assessment of air pollution and temperature effects on health [dissertation]. Seoul: Seoul National University; 2010 (Korean).

Tables and Figures

The use of tables, figures, and photographs that supplement the text are recommended but should not duplicate material found in the body of the manuscript. Tables and figures are placed at the end of the manuscript body and should be numbered (Arabic numerals) in the sequence in which they appear in the text. Approximate locations should be marked in the manuscript body. Titles for tables and figures should be self-explanatory with the first word written with an upper case letter and the rest in lower case letters. The same principle is applied to the content of a table or figure. Tables are prepared with no horizontal or vertical dividing lines. Explanations for and abbreviations used in tables and figures are included as footnotes. Footnotes are indicated by superscript numbers in numerical order (^{1,2,3}...). A *p*-value may be

indicated as follows in the footnotes: [†]*p*<0.1, **p*<0.05, ***p*<0.01, ****p*<0.001, etc.

Korean Summary

The Korean Summary in Korean is requested only for Korean authors and for original articles, review articles, special articles, case reports, and brief reports in this issue. The files of published articles are supplied through an icon "Korean Summary" in the electronic table of contents on the website of *JPMPh* (<https://www.jpmp.org/>).

Reporting Guidelines for Specific Study Designs

For the specific study design, such as randomized control studies, studies of diagnostic accuracy, meta-analyses, observational studies and non-randomized studies, it is recommended that the authors follow the reporting guidelines listed in the following table.

Initiative	Type of study	Source
CONSORT	Randomized controlled trials	http://www.consort-statement.org/
STARD	Studies of diagnostic accuracy	http://www.stard-statement.org/
PRISMA	Preferred reporting items of systematic reviews and meta-analyses	http://www.prisma-statement.org/
STOBE	Observational studies in epidemiology	http://www.strobe-statement.org/
MOOSE	Meta-analyses of observational studies in epidemiology	https://doi.org/10.1001/jama.283.15.2008
